

London LDWA 2026 AGM Web masters report

1. The web site is stable but very slow in loading the events list.
2. A Flickr site has been set up for walk photographs as the photo gallery used by the LDWA web site does not display well on phones. This has been in use since May.
3. The front page on the London area of the LDWA web site has been simplified and the number of menus reduced.
4. An issue with links to future and past walks from icons on the bottom of the home page has been fixed.
5. The email archive is still not formatting upcoming walks correctly and this part of the archived emails remains unreadable. The issue has raised again with National IT but is still not resolved.
6. Migration of committee emails to new system was completed with only one issue that has been resolved (emails sent via the bulk email function failed to reach some of our members).
7. The national focus is on development of a new web site and app. Two companies have been shortlisted for its development and it is expected that the new systems should be complete in the spring of 2027.
