## Greensand Challenge - Routepoints

The list of routepoints below defines the route of the Challenge. Once plotted on your map, the paths and bridleways connecting them should be fairly apparent.

In the absence of physical checkpoints to record progress, you will need to 'self-validate' as you proceed (rather like a self-clip). This requires you to simply take a photograph at each of **11 selected routepoints (shown in bold below)** as described. In order to qualify for a certificate you will then need to email your photographs along with the other data as specified on the event's web page.

For those using electronic mapping the list of routepoints can be downloaded as a GPX file from the event's web page, leaving you to simply connect them together. For convenience, in the GPX file routepoints requiring validation are named 'CP'. Other routepoints, ie those included to help you plot the route, are named 'Guide'.
